

Module 7: MySQL Select Data

- ☐ SELECT statement is
 - ☐ The syntax is:
 - ☐ **SELECT column_list**
 - ☐ **[FROM table_source]**
 - ☐ **[WHERE search_condition]**
 - ☐ **[ORDER BY order_by_list]**
 - ☐ **[LIMIT row_limit]**
 - ☐ SELECT clause is used for specifying the columns
 - ☐ FROM clause is to specify the name of base table
 - ☐ WHERE clause is to filter the rows in the base table depending on the search condition which must be a boolean expression
 - ☐ ORDER BY is for sorting the data retrieved in a specified sequence else the sequence would be same as they appear in the base table
 - ☐ LIMIT clause is to specify the number of rows else all rows would be returned.

1) Select all columns:

- ☐ * is used for

2) Select few columns:

- ☐ Column names can be used

3) Column alias:

- ☐ By default MySQL gives a column in a result set the same name as the column name in the base table.
- ☐ If the column is based on calculated value, it's assigned a name based on expression for the value.
- ☐ To assign a column alias, we code the column specification followed by AS keyword and the new name.
- ☐ If the new name has spaces then put it in "" or "".

4) Column arithmetic:

- ☐ An arithmetic expression that calculates some value.
- ☐ In arithmetic expression we can use :
 - ☐ (H) → *, /, DIV, % (L to R)
 - ☐ (L) → +, - (L to R)
- ☐ We can use parenthesis to change the order of precedence

5) Column concat:

- ☐ CONCAT function can be use to join or concatenate strings which can be any combination of characters.
- ☐ The syntax is : CONCAT(string1 [, string2] ...)

6) Distinct data:

- ☐ To eliminate duplicate rows, we can include the DISTINCT keyword.

WHERE clause:

→ ☐ Where clause is used with SELECT statement to

- ☐ With where clause we can use the following operators:
 - ☐ 1. Comparison operators: =, <>/!= , <, <=, > and >=
 - ☐ 2. Logical operators: AND, OR and NOT
 - ☐ 3. Membership operator: IN and BETWEEN
 - ☐ 4. Pattern operators: LIKE

1) Comparison Operators:

- ☐ Comparison operators (=, <>/!= , <, <=, > and >=) can be used to compare any two expressions.
- ☐ The syntax of comparison operator :
 - ☐ **Where expression_1 operator expression_2**
 - ☐ If the result of comparison is true,
 - ☐ the row being tested is included in the set.
 - ☐ If the result of comparison is false or null,
 - ☐ the row is not included in the result set.
- ☐ **How comparison works:**
 - ☐ Numeric literals are used without quotes and String & date are enclosed in quotes.
 - ☐ Character comparison is case – insensitive.
 - ☐ If we compare null using comparison operator then the result is always null.(to test for null use IS NULL clause).

2) Logical Operators:

- ☐ Logical operators (AND and OR) are used to create compound conditions that consist of two or more conditions.
 - ☐ AND operator is used to specify the search that must satisfy both the conditions.
 - ☐ OR operator is used to specify the search that must satisfy atleast one condition.
 - ☐ NOT operator is to negate a condition.
- ☐ Precedence between them is NOT, AND and OR. To change the level we can use ().

3) Membership Operator:

☐ IN Operator:

- ☐ IN is used to test whether an expression is equal to a value in a list of expressions.
- ☐ List of expressions can be written in any order without affecting the result set.

☐ BETWEEN Operator:

- ☐ BETWEEN is used to test whether an expression falls within range of values (both the lower and upper range are inclusive).
- ☐ The lower limit must be coded first and upper limit as second else MySQL returns an empty set.

4. Pattern Operator:

- ☐ LIKE operator is to retrieve rows that match a string pattern called a mask → which determines which values in the columns satisfy the condition.
- ☐ LIKE wildcards:
 - ☐ % → matches any string of zero or more characters.
 - ☐ _ → matches a single character.

Order by:

- ☐ ORDER BY clause specifies how
- ☐ The syntax is :
 - ☐ **ORDER BY expression [ASC | DESC] [, expression [ASC | DESC]] ...**
- ☐ We can sort by one or more columns and we can sort each column in either ascending (ASC) or descending (DESC) sequence. ASC is default.
- ☐ How order by works:
 - ☐ In ASC sort, special characters appear first, followed by numbers and then letters.
 - ☐ NULL always appear first in any sort sequence.
 - ☐ ORDER BY clause can use numbers to specify the columns to use for sorting. 1 represents first column, 2 represents second column, and so on.
 - ☐ ORDER BY clause can include any valid expression and column alias also.

LIMIT:

- ☐ LIMIT clause is to limit the
- ☐ The syntax is:
 - ☐ **LIMIT [offset,] row_count**
- ☐ Offset specifies the first row to return, where offset of first row is 0.
- ☐ Row_count specifies the maximum row count beginning with first row.
- ☐ Typically LIMIT is used along with ORDER BY clause.

MCQs

1. In select statement what does * stands for

Options:

- A. all columns of the table are to be returned.
- B. all records meeting the full criteria are to be returned.
- C. all records with even partial criteria met are to be returned.
- D. None of the above is correct.

Solution:

2) Which of the SQL statements is correct? (Select two)

Options:

- A. SELECT Username AND Password FROM Users
- B. SELECT Username, Password FROM Users
- C. SELECT Username, Password WHERE Username = 'user1'
- D. SELECT *, Username, Password FROM Users

Solution:

3. Which statement reports on unique JOB_ID values from the EMPLOYEES table? (Choose all that apply.)

Options:

- A. SELECT JOB_ID FROM EMPLOYEES;
- B. SELECT UNIQUE JOB_ID FROM EMPLOYEES;
- C. SELECT DISTINCT JOB_ID, EMPLOYEE_ID FROM EMPLOYEES;
- D. SELECT DISTINCT JOB_ID FROM EMPLOYEES;

Solution:

4) To give a temporary name to a table, or a column in a table for more readability, what is used?

Options:

- | | |
|------------------|-----------------|
| 1. SQL Wildcards | 2. SQL aliases |
| 3. SQL LIKEs | 4. SQL Comments |

Solution:

5) Find all the cities whose humidity is 89

Options:

- A. SELECT city WHERE humidity = 89;
- B. SELECT city FROM weather WHERE humidity = 89;
- C. SELECT humidity = 89 FROM weather;
- D. SELECT city FROM weather;

Solution:

6. Which of the following statements contains an error?

Options:

a) SELECT * FROM emp WHERE empid = 10003;	b) SELECT empid FROM emp WHERE empid = 10006;
c) Select empid from emp;	d) SELECT empid WHERE empid = 1009 AND lastname = 'GELLER';

Solution:

7. Which operator tests column for the absence of data?

Options:

- | | |
|---------------------|------------------|
| A. EXISTS operator | B. NOT operator |
| C. IS NULL operator | D. None of these |

Solution:

8. Which operator performs pattern matching?

Options:

- | | |
|---------------------|------------------|
| A. BETWEEN operator | B. LIKE operator |
| C. EXISTS operator | D. None of these |

Solution:

9. How to select all data from student table starting the name from letter 'r'

Options:

- A. SELECT * FROM student WHERE name LIKE 'r%';
- B. SELECT * FROM student WHERE name LIKE '%r%';
- C. SELECT * FROM student WHERE name LIKE '%r';
- D. SELECT * FROM student WHERE name LIKE '_r%';

Solution:

10. What is the meaning of LIKE '%0%0%'

Options:

- A. Feature begins with two 0's
- B. Feature ends with two 0's
- C. Feature has more than two 0's
- D. Feature has two 0's in it, at any position

Solution:

11. Find the names of the cities with temperature and condition whose condition is neither sunny nor cloudy

Options:

- A. SELECT city, temperature, condition FROM weather WHERE condition NOT IN ('sunny', 'cloudy');
- B. SELECT city, temperature, condition FROM weather WHERE condition NOT BETWEEN ('sunny', 'cloudy');
- C. SELECT city, temperature, condition FROM weather WHERE condition IN ('sunny', 'cloudy');
- D. SELECT city, temperature, condition FROM weather WHERE condition BETWEEN ('sunny', 'cloudy');

Solution:

12. Which of the following query is correct for using comparison operators in SQL

Options:

- A. SELECT name, course_name FROM student WHERE age>50 and <80;
- B. SELECT name, course_name FROM student WHERE age>50 and age <80;
- C. SELECT name, course_name FROM student WHERE age>50 and WHERE age<80;
- D. None of these

Solution:

13. Find the name of those cities with temperature and condition whose condition is either sunny or cloudy but temperature must be greater than 70F

Options:

- A. SELECT city, temperature, condition FROM weather WHERE condition = 'sunny' AND condition = 'cloudy' OR temperature > 70;
- B. SELECT city, temperature, condition FROM weather WHERE condition = 'sunny' OR condition = 'cloudy' OR temperature > 70;
- C. SELECT city, temperature, condition FROM weather WHERE condition = 'sunny' OR condition = 'cloudy' AND temperature > 70;
- D. SELECT city, temperature, condition FROM weather WHERE condition = 'sunny' AND condition = 'cloudy' AND temperature > 70;

Solution:

14. Which two of the following conditions are equivalent to each other?

Options:

- A. WHERE SALARY <=5000 AND SALARY >=2000
- B. WHERE SALARY IN (2000,3000,4000,5000)
- C. WHERE SALARY BETWEEN 2000 AND 5000
- D. WHERE SALARY > 2000 AND SALARY < 5000
- E. WHERE SALARY >=2000 AND <=5000

Solution:

15. Which two of the following conditions are equivalent to each other?

Options:

- A. WHERE COMMISSION_PCT IS NULL
- B. WHERE COMMISSION_PCT = NULL
- C. WHERE COMMISSION_PCT IN (NULL)
- D. WHERE NOT(COMMISSION_PCT IS NOT NULL)

Solution:

Q16) Wrong statement about ORDER BY keyword is

Options:

- 1. Used to sort the result-set in ascending or descending order
- 2. The ORDER BY keyword sorts the records in ascending order by default.
- 3. To sort the records in ascending order, use the ASC keyword.
- 4. To sort the records in descending order, use the DECENDING keyword.

Solution:

17. Find cities in the increasing order of temperature. (Select two)

Options:

- A. SELECT city FROM weather ORDER BY temperature;
- B. SELECT city, temperature FROM weather;
- C. SELECT city, temperature FROM weather ORDER BY temperature;
- D. SELECT city, temperature FROM weather ORDER BY city;

Solution:

18. With SQL, how can you return all the records from a table named "Persons" sorted descending by "FirstName" ?

Options:

- a) SELECT * FROM Persons SORT BY 'FirstName' DESC
- b) SELECT * FROM Persons ORDER FirstName DESC
- c) SELECT * FROM Persons SORT 'FirstName' DESC
- d) SELECT * FROM Persons ORDER BY FirstName DESC

Solution:
